PROFESSIONAL SUMMARY

Full-Stack Developer with 2+ years of experience building scalable web applications, specializing in TypeScript, Next.js, and Node.js across the full stack. Experienced in integrating third-party platforms end-to-end from vendor documentation, including Stripe, Airwallex, and Singpass. Led a development team of three to deliver production-ready products in agile environments, with a strong focus on clean architecture, maintainable code, and practical problem-solving.

EDUCATION

Bachelor of Computer Science (HONS.)	June 2023
CGPA: 3.18	
Universiti Teknologi Mara Melaka, Kampus Jasin	
Diploma in Applied Science	Feb 2021
CGPA: 3.21	
Universiti Teknologi Mara Perlis, Kampus Arau	

SKILLS

Expert:	- TypeScript - Next.js - FastAPI	- JavaScript - React	- Node.js - Vue.js
Proficient:	- Tailwind CSS - PHP (Laravel) - Prisma - Linux server admin - REST API design	- Go - PostgreSQL - Docker - Cloudflare (Tunnels, Zero Trust) - Figma	- Python (Flask) - MySQL - Git - Supabase - Sentry
Familiar:	Flutter	Android Studio (Java)	SCSS/SASS
3rd-Party Integrations:	- Stripe - Firestore / RTDB	Airwallex	Singpass
AI Tooling:	Claude Code	Cursor	Antigravity

WORKING EXPERIENCES

Full-Stack Developer - myFirst Tech Sdn Bhd

Mar 2025 - Current

- Maintain and support the company's internal web portal, keeping production systems reliable.
- Designed and built the base architecture for Portal 3.0, the next-generation portal rebuild.
- Designed the customer journey for the company's subscription platform — mapping the end-to-end flow, not just implementing it.
- Designed and delivered the integration workflows for third-party systems — Singpass for national digital identity, and Airwallex and Stripe for payments, over webhook-driven event flows.
- Built a real-time, AI-integrated customer-support chat.
- Work AI-assisted day to day — Cursor and Anthropic's Claude in the editor, plus CLI-driven agents to automate routine tasks where the task suits it.

Tech Stacks: Next.js, TypeScript, Go, Singpass, Stripe, Airwallex, Webhooks, Firestore, RTDB, PostgreSQL

Junior Software Developer and Operations (FE) - Guardgenius Sdn Bhd

Aug 2024 - Mar 2025

- Developed and optimized responsive web applications using Vue.js and TailwindCSS, ensuring cross-device compatibility and a seamless user experience on all devices.
- Collaborated with cross-functional teams to integrate RESTful APIs, enhancing data flow and optimizing application performance.
- Maintained code quality through Git version control, utilizing branching strategies (e.g., staging and development) for efficient development and integration.
- Redesigned and restructured the company's website using Figma, improving user experience and aligning the design with current business objectives.
- Utilized Sentry for bug tracking and resolution, significantly improving application performance and reducing load times.
- Implemented email automation via a mail server API, enhancing customer communication by automating email notifications.
- Refactored and cleaned up legacy code, improving maintainability and readability of previously developed features.

Tech Stacks: VueJS, Flask, MySQL, Git, Figma

Software Developer Intern - AQ Wise Sdn Bhd

March 2024 - June 2024

- Completed a short course led by internship supervisor, gaining hands-on experience in Flutter development.
- Contributed to a Flutter project by adding a responsive sidebar, improving navigation.
- Developed an e-commerce platform using Laravel, including product management and shopping cart features.
- Designed and managed MySQL databases for handling product catalogs, user profiles, and order histories.
- Built dynamic interfaces with Blade templates and managed MySQL databases for product catalogs and user data.

Tech Stacks: Flutter, Laravel, HTML, CSS, PHP, Tailwind CSS.

RELEVANT PROJECTS

CPU MOTHERBOARD COMPATIBILITY CHECKER

Final Year Project (UiTM Melaka, Jasin Campus)

- Develop a web extension that integrated with Lazada Cart page to verify component (CPU/Motherboard) compatibility.
- Implemented FastAPI for the system's backend.
- Front End - Web extension hosted on the Microsoft Extension Store.
- Back End - System API hosted on Render.com using Dockerized environment

Tech Stacks: HTML, CSS, JavaScript, Python, Docker, FastAPI, Data Scraping, Regex

Achievements: Best Industrial Panel Final Year Project (2024)

MNS TECH STORE

Internship Side-Project

- Developed an e-commerce platform specializing in PC parts and accessories for PC builders.
- Developed the application using Laravel's MVC framework with Blade templates for the frontend.
- Utilized a MySQL database for data management.
- Leveraged Tailwind CSS for rapid styling
- Deployed the project on InfinityFree for hosting.

Tech Stacks: HTML, CSS, PHP, Laravel, MySQL, Tailwind

BAKERS HEIST

University Group Project

- Reimplemented a bakery shop app designed from Wix to HTML and CSS.
- Focused on implementing a design, emphasizing visual appeal and layout
